Cyber Security Policy

Policy brief & purpose

Our company cyber security policy outlines our guidelines and provisions for preserving the security of data and technology infrastructure.

The more we rely on technology to collect, store, and manage information, the more vulnerable we become to severe security breaches. Human errors, hacker attacks and system malfunctions could cause great financial damage and may jeopardize our company's reputation.

For this reason, we have implemented a number of security measures. We have also prepared instructions that may help mitigate security risks. We have outlined both provisions in this policy.

Scope

This policy applies to all our employees, contractors, volunteers, and anyone who has permanent or temporary access to our systems and hardware.

Policy elements

Confidential data

Confidential data is secret and valuable. Common examples are:

- Unpublished financial information
- Data of customers, partners, vendors
- Patents, formulas, or new technologies
- Customer lists (existing and prospective)

All employees are obliged to protect this data. In this policy, we will give our employees instructions on how to avoid security breaches.

Protect personal and company devices.

When employees use their digital devices to access company emails or accounts, they introduce security risk to our data. We advise our employees to keep both their personal and company-issued computer, tablet, and mobile phone secure. They can do this if they:

- Keep all devices password protected
- Choose and upgrade a complete antivirus software
- Ensure they do not leave their devices exposed or unattended
- Install security updates of browsers and systems monthly, or as soon as updates are available
- Log into company accounts and systems through secure and private networks only via a secure VPN

Stainless UK

Cyber Security Policy

We also advise our employees to avoid accessing internal systems and accounts from other people's devices or lending their own devices to others.

When new hires receive company-issued equipment they will receive instructions for:

- Computer set up
- Password management tool setup
- Internet and Electronic Mail Usage policy
- Social Media Policy
- Receive Cyber Security Awareness training

They should follow instructions to protect their devices and refer to our Network Engineers if they have any questions.

Keep emails safe

Emails often host scams and malicious software (eg worms) To avoid virus infection or data theft, we instruct employees to:

- Avoid opening attachments and clicking on links when the content is not adequately explained (eg "watch this video, it's amazing")
- Be suspicious of clickbait titles (eg offering prizes, advice)
- Check email and names of people they received a message from to ensure they are legitimate
- Look for inconsistencies or give-aways (eg grammar mistakes, capital letters, excessive number of exclamation marks!)

If an employee isn't sure that an email, they received is safe, they can refer to our IT Service provider.

Manage passwords properly

Password leaks are dangerous since they can compromise our entire infrastructure. Not only should passwords be secure so they won't be easily hacked, but they should also remain secret. For this reason, we advise our employees to:

- Choose passwords with at least eight characters (including capital and lower-case letters, numbers, and symbols) and avoid information that can be easily guessed (eg birthdays)
- Remember passwords instead of writing them down. If employees need to write their passwords, they are obliged to keep the paper or digital document confidential and destroy it when their work is done
- Exchange credentials only when absolutely necessary. When exchanging them in person isn't possible, employees should relay them by phone instead of email, and only if they personally recognise the person they are talking to
- Change their passwords every two months

Stainless UK

Cyber Security Policy

Remembering a large number of passwords can be daunting. We will purchase the services of a password management tool which generates and stores passwords. Employees are obliged to create a secure password for the tool itself, following the above mentioned advice.

Transfer data securely

Transferring data introduces security risk. Employees must:

- Avoid transferring sensitive data (eg customer information, employee records) to other devices or accounts unless absolutely necessary. When mass transfer of such data is needed, we request employees to ask our Network Engineers for help
- Share confidential data over the company network system and not over public Wi-Fi or a private connection
- Ensure that the recipients of the data are properly authorised people or organisations, and they have adequate security policies
- Report scams, privacy breaches and hacking attempts

Our Network Engineers need to know about scams, breaches, and malware, so that they can better protect our infrastructure. For this reason, we advise our employees to report perceived attacks, suspicious emails, or phishing attempts as soon as possible to our specialists. Our Network Engineers must investigate promptly, resolve the issue, and send a companywide alert when necessary.

Our Network Engineers are responsible for advising employees on how to detect scam emails. We encourage our employees to reach out to them with any questions or concerns.

Additional measures

To reduce the likelihood of security breaches, we also instruct our employees to:

- Turn off their screens and lock their devices when leaving their desks
- Report stolen or damaged equipment as soon as possible to HR or to the IT Department
- Change all account passwords at once when a device is stolen
- Report a perceived threat or possible security weakness in company systems
- Refrain from downloading suspicious, unauthorised, or illegal software on their company equipment
- Avoid accessing suspicious and unauthorised websites

We also expect our employees to comply with our social media and internet usage policy.

Stainless UK

Cyber Security Policy

Our Network Provider and IT Administrator provides:

- Installation of firewalls, anti-malware software and access authentication systems
- Regular updates and informs employees about new scam emails or viruses, and ways to combat them
- Thorough investigations of any security breaches
- Multifactor authentication
- Cyber essentials and accreditations

Our company will have all physical and digital shields to protect information.

Remote employees

Remote employees must follow this policy's instructions too. Since they will be accessing our company's accounts and systems from a distance, they are obliged to follow all data encryption, protection standards and settings, and ensure their private network is secure.

We encourage them to seek advice from our IT Administrator.

Disciplinary Action

We expect all our employees to always follow this policy and those who cause security breaches may face disciplinary action:

- First-time, unintentional, small-scale security breach: We may issue a verbal warning and train the employee on security
- Intentional, repeated, or large scale breaches (which cause severe financial or other damage) We will invoke more severe disciplinary action up to and including termination of their employment contract

We will examine each incident on a case-by-case basis.

Additionally, employees who are observed to disregard our security instructions will face progressive discipline if their behaviour hasn't resulted in a security breach.

Take security seriously

Everyone, from our customers and partners to our employees and contractors, should feel that their data is safe. The only way to gain their trust is to proactively protect our systems and databases. We can all contribute to this by being vigilant and keeping cyber security top of mind.
